# Want to find the best route through the data maze?

'Data is growing worldwide at 59% per year with 70-85% of that data as unstructured data'- *Gartner*

'Data is predicted to grow 44 times over the next decade the number of IT Professionals is only growing at 1.4 times' - *IDC*

With the availability of large amounts of data across multiple platforms, business savvy companies require an efficient way of generating insightful, real-time information. Sifting through this vast volume of data can be daunting. Some examples of challenges GyanSys' experts can help you solve are listed below:

- Data is cumbersome & too complex to analyze
- Large volumes of data posing accessibility & understandability issues
- Road blocks to generate reports
- Low trust levels on existing data
- Data aggregation issues

The GyanSys Microsoft Advantage

At GyanSys, we are rapidly ramping up our Microsoft practice, with established competencies in Collaboration and Content and Business Intelligence. Subject matter experts with a strong understanding of our customer's business issues and our ability to implement viable solutions are what make GyanSys your 'go to' partner. All of our resources have been certified in Microsoft competencies after completing a series of rigorous examinations, demonstrating our expertise and meeting Microsoft's extensive technology requirements.

Our expertise has placed us among the top 5 percent of Microsoft partners, enabling us to gain early access to new software and specialized technical support as well as other Microsoft services.
All of this helps us serve you better.

How does GyanSys help resolve your data challenges?

We have deep expertise surrounding the Microsoft BI Stack. This includes:

Self-service
Empowers the users with direct access to organizational data by leveraging SharePoint 2013 Excel Services and PerformancePoint services, alongside Office 2013, supported by SQL Server 2012

Data Integration
Enables business process owners to make educated decisions with the aid of Microsoft SQL Server 2012 Integration Services (SSIS)

Data Warehousing
SQL Server 2012 Parallel Data Warehouse allows centralization of all data storage, effectively safeguarding retrospective organizations data

Reporting
Generate insightful reports by taking advantage of PowerView, Azure Reporting and simplified sharing and collaboration

Online analytical processing (OLAP)
Intuitive data analysis along with a centralized repository for the organization's business logic and key performance indicators (KPIs) using Microsoft SQL Server 2012 Analysis Services and Excel 2013

Analysis
Powerful tools for analysis combined with enhanced communication features that take advantage of SharePoint 2013, Office 2013, Microsoft SQL Server 2012 Analysis Services

Scorecards and dashboards
Increased accountability across the organization by aggregating tailor-made scorecards and dashboards into the overall BI with the help of PerformancePoint Services in SharePoint 2013

Enterprise search
Simplify search processes by taking advantage of FAST search technology within SharePoint 2013
